

✓ Advanced Technology

Our app's intuitive design and user-friendly interface make it easy for users to collect all vital information needed for their insurance claim. Additionally, our built-in tools and checklists provide users with a clear roadmap to navigate the often-overwhelming process of filing a claim.

✓ Confidence in Every Step

Our comprehensive guides cover everything from what to do at the scene of the accident to how to file a claim with their insurance company. Users can follow along at their own pace and have the confidence of knowing they have a clear roadmap to follow.

✓ Peace of Mind with Time-Stamped and Verified Photos

We understand that documentation is key when it comes to filing an insurance claim. That's why our app is equipped with advanced technology that allows users to take time-stamped and verified photos of the accident scene. Our app uses sophisticated algorithms to verify the authenticity of the photos, ensuring that they are not altered in any way. This provides users with the peace of mind of knowing that the photos they take will hold up as evidence in the event of a claim.

✓ Always Here for You

We understand the importance of being there for our business customers when they need us the most. That's why we offer 24-hour support to ensure that our customers always have access to the help they need.

✓ Stay Connected with Your Customers

We understand the importance of maintaining a strong connection with your customers. That's why we offer a dedicated business portal that provides you with direct access to your customers.

Our portal allows you to send notifications, reminders, and promotional messages directly to your customers, keeping them informed and engaged with your business. With ringfenced access, you can rest assured that your communications are secure and targeted only to your customers.

Access your personalized app management dashboard.

Partnering with us has never been easier, as we provide secure hosting in a datacenter as an application service provider. We will customize the app to match your branding, ensuring a seamless onboarding experience for your customers. Once the app rebrand is complete, we will submit the app for review and publish it to the main app stores upon approval.

Your customers can easily download the app from the app stores and register by scanning a personalized QR code from the FN dashboard. They will then have access to motorist tools such as a free dashcam and accident reporting system.

The system is straightforward, with user information transmitted to a web-based database. As the system administrators, you can access the web-based dashboard, which provides all the necessary information about your users. The dashboard is centralized, making it easy to access different areas with a few clicks.

The user management area allows you to invite new users, block or remove users if necessary, and view their account information, including address, contact details, and history of FNOL reports.

Our mapping module is a new feature that shows the areas with the most activity based on FNOLs received. It also allows you to drill down to street level to see where accidents happen when you receive a first notification of loss.

Our standard range of reports and statistics is available on the dashboard, with the option to create specific reports based on your needs. All data transmitted from the app to the web is fully encrypted, ensuring a high level of security.

Overall, partnering with us can streamline your claims process, reduce fraud, overhead, administration, and increase your bottom line. Contact us today for more information.
